

AeroLink

AeroLink is a web-based application that TracWare has designed to allow real time data transfer between AeroTrac™ and other systems (such as SAP, Oracle, BAAN, etc). The application uses structured XML data files, and offers full error checking and auto-email alerts.

The site provides the users with a secure login, and can be configured to input and output various categories of data (e.g. Part Masters, Works Orders, Kits, Technical Drawings, etc) from different systems.

Inputs are mapped to a pre-defined file format, and full error checking and auto-email alerts are built in.
